

### Keg / Barrel / Drum Push

The Objective of this event is for Riders to line their motorcycle behind a barrel, and push the Keg / Barrel or Drum depending on what you use, with the front wheel of their motorcycle, Beginning at the starting area of your Rodeo arena to the other Finish end of the arena in the fastest time..

Depending on how your committee wants to run this event there is a few options to consider as this event can present a bit more of a risk to the contestants. Should you be using Metal or Plastic Kegs or Barrels and do you decide to let them go whole hog and not have lanes with this option you can have barrels being pushed into the sides of fellow contestants or a Rider concentrating so much on what they are doing and the next thing is they are having a run in with one of the other competitors this can be a bit painful for the both of them.

So do you have Lanes Marked out that the Riders must try to keep the Barrel Between, or no lanes?

Can the Rider Ram the Barrel with their front wheel or must the barrel be pushed by the front wheel?

The one item recommend is the use of Plastic Drums / Barrels. The rest is up to you and your committee.
